Music...

it should be inspiring, personal, enjoyed...
with **earphones designed for a woman.**

Introducing two earphone collections:

The **GEM**collection...

High-fashion earphones specifically designed and engineered for women's smaller ears.

White Rose

Titanium

Amber

Sapphire

Amber

Titanium

Turquoise Blue

Midnight

Scarlet

Midnight Rose

and...
The **ICE** collection.

Both collections are uniquely fitted for women's ears
Better fit for women's smaller ears means more comfort and improved noise isolation, for a beautiful sound experience.

Fashion-Forward Design
Express your individual fashion-sense with your earphones. Taking cues from up and coming fashion trends these collections features color coordinated electroplated housings with cut glass crystals and gems for stunning and bold looks.

Beautiful Sound
Maroo Audio's proprietary micro drivers deliver deep bass response and crystal clear highs with our signature full-range sound, making these earphones sound as beautiful as they look.

Midnight

Scarlet

GEMcollection

Each earphone is mounted with a beautifully cut crystal gem, offset by color coordinated electroplated housing for a bold look.

ICEcollection

Each ear piece is encircled with brilliant inset crystals, offset by color coordinated electroplated housing for a stunning uncommon look.

Features

- Engineered and designed for women's ears with five optimized ear-tip sizes, built to suppress external noise for safe listening levels while channeling the purest audio.
- Convenient in-line mic and button control for:
 - Call/answer/end conversation
 - Pause/play/skip forward/skip back
 - Voice activation for Siri, Cortana, and Google Now
- Inspiring full range sound with rich bass performance and crisp clear highs
- Full 20Hz – 20kHz frequency response
- Proprietary 5.5 mm and 6.0 mm tuned drivers
- 1.2 meter soft-touch tangle free cable
- 45° safety angle 3.5mm plug
- Velvet ring box and quick-capture velvet travel pouch

Universal In-Ear Monitors

By Maroo Pro Audio

Three products; from a critical single driver, a fully balanced triple driver, to a pinnacle five driver system. Evoke, Evolve, Encore. Studio to Audiophile, performance defined.

Number One Driver Manufacturer

Utilizing Knowles balanced armature drivers, paired with ACS patent pending IRIS technology, the universal in-ear monitors deliver brilliantly accurate sound across the entire spectrum. Whether used for listening to music on stage, in the studio, or at home, they will reveal every detail in your music you never knew was there.

Superior Memory Foam Eartips

Studio series universal fit In-Ear monitors include 3 sizes of memory foam tips that form to the ear canal to provide unparalleled comfort, while isolating outside noises by an exceptional 26 dB.

Designed and engineered in the UK

Worldclass Linum® Cabling

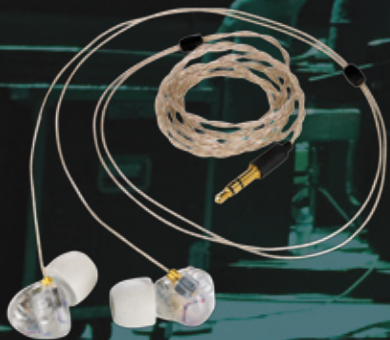

Each enamel-coated cable is made from 6 litz wire conductors, containing 7 individual silver plated copper strands to ensure no coloration of the sound. Interwoven with aramid fibres to provide a market leading pull strength of 60N, Linum cables eliminate microphonics and will not corrode, oxidize, or change color. Ultra lightweight and incredibly thin, this cable is near invisible when worn, adding another dimension to the overall listening experience.

Evoke Studio Series

MA-EP9001

- Single driver system
- -26 dB noise isolation
- 20–20KHz frequency response
- 50 Ohms Impedance (1KHz)
- 105.5db @ 0.1V (1 KHz)

Evolve Studio Series

MA-EP9003

- Triple driver system
- -26 dB noise isolation
- 20–20KHz frequency response
- 50 Ohms Impedance (1KHz)
- 119.9db @ 0.1V (1 KHz)

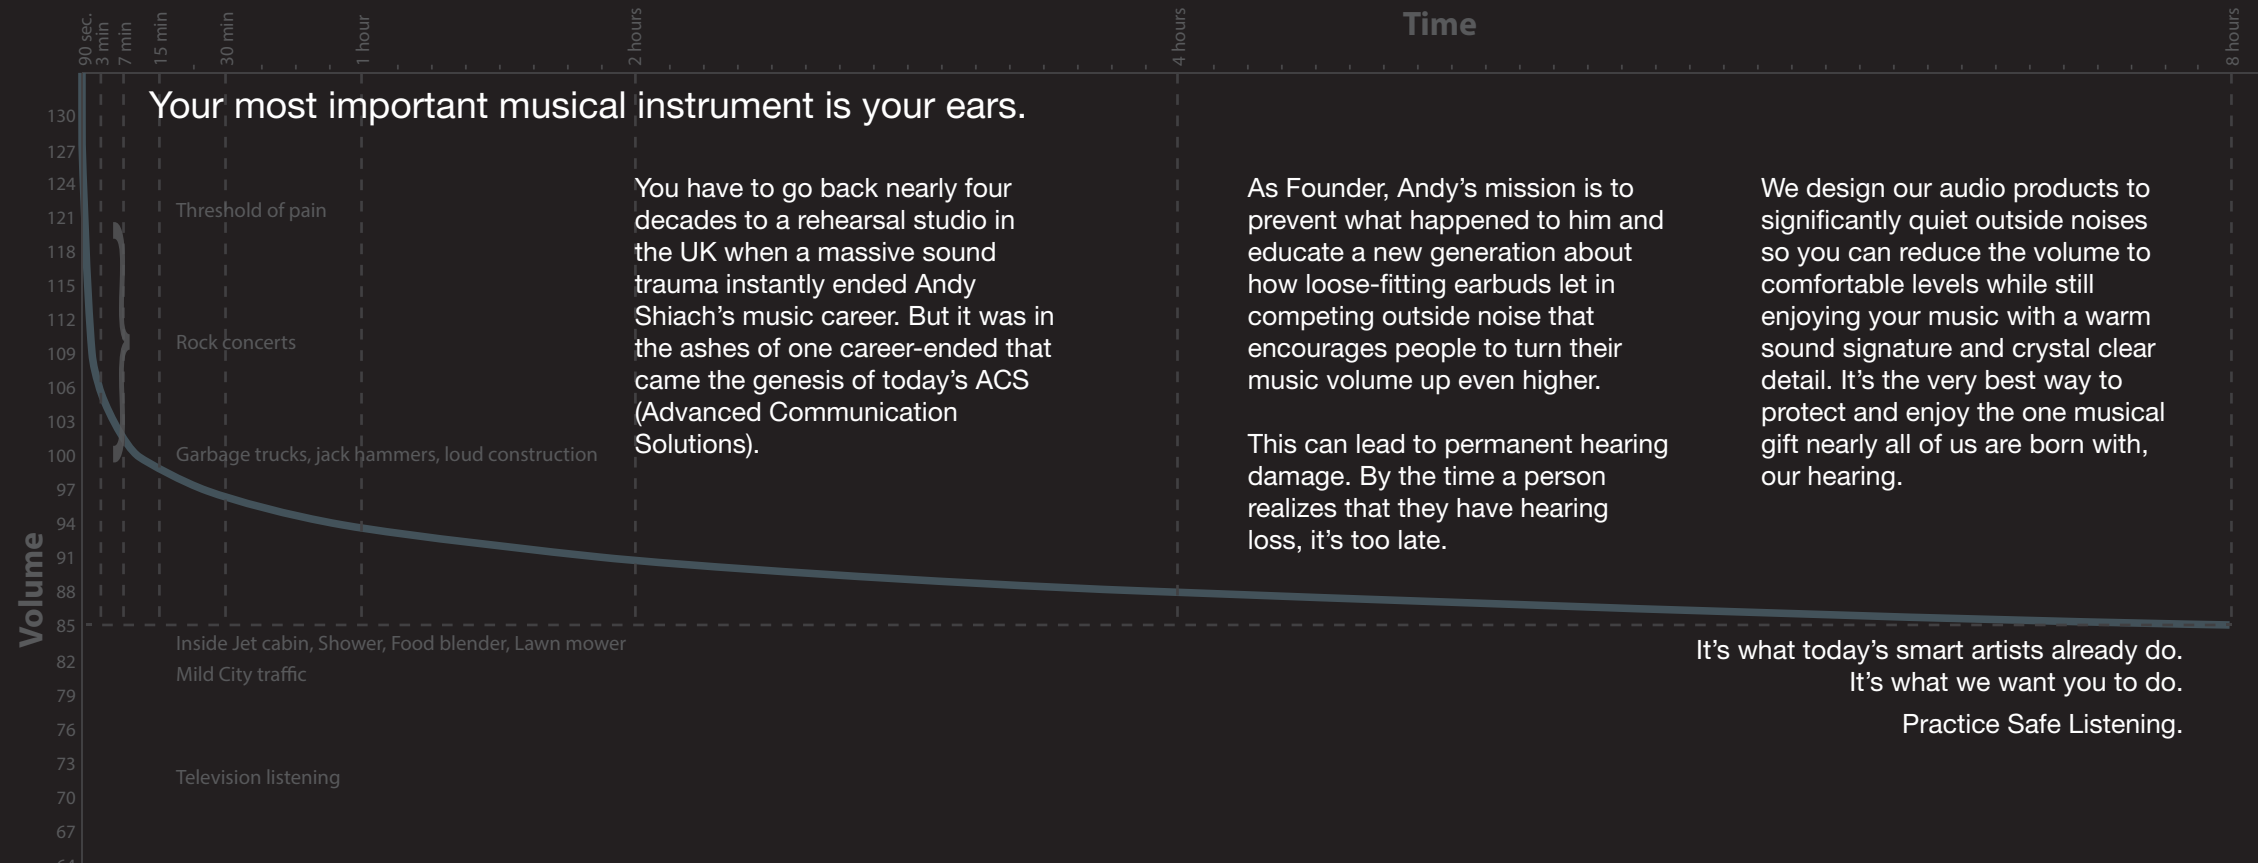

Encore Audiophile Series

MA-EP9005

- Five driver system
- -26 dB noise isolation
- 20–21KHz frequency response
- 85 Ohms Impedance (1KHz)
- 120.5db @ 0.1V (1 KHz)

Your most important musical instrument is your ears.

You have to go back nearly four decades to a rehearsal studio in the UK when a massive sound trauma instantly ended Andy Shiach's music career. But it was in the ashes of one career-ended that came the genesis of today's ACS (Advanced Communication Solutions).

As Founder, Andy's mission is to prevent what happened to him and educate a new generation about how loose-fitting earbuds let in competing outside noise that encourages people to turn their music volume up even higher.

This can lead to permanent hearing damage. By the time a person realizes that they have hearing loss, it's too late.

We design our audio products to significantly quiet outside noises so you can reduce the volume to comfortable levels while still enjoying your music with a warm sound signature and crystal clear detail. It's the very best way to protect and enjoy the one musical gift nearly all of us are born with, our hearing.

It's what today's smart artists already do.
It's what we want you to do.
Practice Safe Listening.
