Orka One

Bluetooth 5.0 Hearing Aids

Did you know?

14.3% or **38 million**

Americans over 12 years old suffer from acute hearing loss according to Johns Hopkins Cochlear Center for Hearing and Public Health.

According to the Better Hearing Institute, hearing loss has negatively impacted annual household incomes by up to

\$12,000

and hearing aids mitigate that loss by as much as **50%** to the healthcare expenditure.

Introducing Orka One

A hearing aid that's as sleek,
functional and affordable
as it is easy and effective to use

AI DeNoise

Orka One is the world's first hearing aid powered by proprietary AI DeNoise technology that filters noise from chaotic listening environment and improves human voice recognition in real-time.

AI DeNoise runs server-level neural network on an earphone-level CPU to automatically identify noise, filter it out and enhance human voices in real time.

Our mission

ORKA

Orka's mission is to make healthcare more human-centered and accessible by bringing together design and technology to solve the challenges of hearing loss intelligently and affordably. To achieve it, the company aims to eliminate the barriers and lower the expense of hearing aids by bringing new technology to users who expect ease and sophistication in the design, performance, and intelligence of all their devices.

Erase the stigma about hearing loss

The negative stigma associated with hearing aids deters people from seeking treatment. Many people believe that wearing hearing aids would make them look older and weaker. It's time to change the discussion around that. At Orka, we refrain from contributing to the stigma. We would never trade on the idea that hearing loss is shameful, thus hearing aids should be hidden. Let's move things forward.
