

Sick of skimming?  
You're ready for Ariel

On a hot day, pool owners are often discouraged from jumping right in if dust and debris loom the surface. Hand-skimming a pool, especially a large one, can be a chore. Ariel by Solar-Breeze is a new robot changing the pool industry by eliminating the need to hand-skim a pool by combining the force of solar-power with intelligent technology to collect debris from the surface.

With Ariel you'll see:

**60%** Reduction in Pool-Pump Runtime

**99%** Reduction in Hand-Skimming

**100%** Swim Ready

**Turn on, drop in and go.** With a single button start, Ariel is easy to start up and start cleaning your pool right away.

**No plugs, just play.** Ariel is fully solar powered, and with a powerful backup battery, Ariel can run 10 hours and more off a charge if there is no sunlight available. No need to buy extra long cords to fit your pool length – Ariel does not use cords or hoses.

**Simple removal.** Ariel removes from your pool easily with a no-slip ergonomic handle when time to swim or empty out the robot. Emptying her out is also a breeze, with a slide-and-glide tray that removes quickly to dump biomaterial collected from your pool. No clunky bags or expensive one-use filters.

**Filtered, crystal clear water.** Slide out tray includes an embedded mesh filter that collects and retains particles all the way down to 200 microns in size, effectively filtering all pool water that passes through Ariel's tray.

**All-over coverage.** Ariel smartly navigates the entire top of your pool avoiding obstacles with her intelligently built sensors. Ariel travels 10 – 20 feet every minute & virtually avoids ever getting stuck.

**So many pools.** Ariel functions great in pools of all shapes and sizes & even pools with a salt base or chlorine base. She functions in water salinity of up to 6,500 ppm. Whether your pool is indoors or in the heat, Ariel can withstand temperatures between 40 degrees F and 130 degrees F.

**Eco-friendly.** Ariel's cleaning all the time approach while only using solar power means this pool cleaning robot helps reduce swimming pools from their dependence on grid-power.

**Better for your wallet.** With less pool pump run-time needed, pool owners preserve the life of their pumps, use less costly electricity, and reduce the number of pollutants that would have been attributed to their pool maintenance routine.

"The leaves are hitting us HARD.  
Ariel is our ONLY HOPE!" - Rich G.
